Every option for big-time savings, at one big event

sponsored by:
Each year the cleantech industry is becoming increasingly significant in all countries of the world. Therefore the Ministry of National Infrastructures, Energy and Water is operating through various channels in order to lay down suitable infrastructure to enable the Israeli cleantech industry to prosper. In the past year, I have led some important initiatives that directly affect the industry: in the field of renewable energy to reduce the use of coal in power stations and increase the use of natural gas and in the field of energy efficiency. All these, as well as their contribution to the cleantech industry, are measures which are necessary for the long-term reduction in greenhouse gas emissions for a cleaner and better future for the citizens of the State of Israel.

In the field of renewable energy, in order to reach the government’s target of producing 10% of electricity from renewables, my ministry has formulated a comprehensive plan. Among other things, the quota for the production of solar energy will be increased over the next year by about 1000MW, the production quota from wind turbines will be doubled, and additional generation of electricity of 150MW from biomass will be considered.

When it comes to increasing the use of natural gas, the state is expected to provide grants to gas stations investing in natural gas fueling facilities, to bus operators who choose to use CNG-powered buses, and to factories who will convert their systems to natural gas in the near future.

In addition to all this, energy-efficiency measures have a prominent place in the work of my ministry. Most of these measures are economically viable, returning the investment within a few years, saving electricity for the end-user and dramatically reducing the investments needed to set up new power plants which require much capital. Therefore, in September 2015 the government decided on a 17% reduction in electricity consumption by 2030. As part of the Ministry’s activities in the years 2010-2015, grants totaling 55 million shekels were awarded to the industrial, commercial and public sectors for the upgrade of energy-efficient technologies which are expected to lead to savings of around 100 million shekels for the economy each year. At the same time, the ministry is working to promote the training of professional personnel in the energy sector both through grants supporting higher education institutions in the construction and upgrading of energy laboratories and by funding the training of energy inspectors in institutions and organizations.

Sincerely,
Dr. Yuval Steinitz

In addition to all this, energy efficiency has a prominent place in the work of the Ministry. It is usually of benefit within a few years, saves electricity for the end user and significantly reduces investments in new power generation capacity in the field of renewable energy, in order to reach the government target of power generation and energy efficiency – all these, along with the contribution to the agricultural sector, are necessary moves for the long-term reduction of greenhouse gas emissions in the field of professional activities and the various forms of support for higher education in the field of energy and the training of the workforce. A small amount of money invested on the part of the private sector, can lead to significant improvements in the standards of living of the municipalities, as well as in the quality of the environment.

Dr. Yohanan Steinits

The Ministry has presented an active and comprehensive strategy for the promotion and support of water technologies, energy efficiency, renewable energy, and the like in the industrial, commercial and public sectors, with a total of $55 million. The government is committed to the promotion and implementation of energy efficiency technologies in the industrial, commercial and public sectors, with a total of $55 million.
SINO-SINGAPORE GUANGZHOU KNOWLEDGE CITY
Comprehensive Industrial Plan
Six Pillar Industry Clusters + Operational Headquarter Economy to Promote a Knowledge-based Economy

SSGKC aims to attract high-end industries, focusing on their strategic and long-term growth in order to build a strong base for the knowledge-based economy. The formation of six pillar industry clusters and development of the operational headquarters economy of the knowledge-based economy will expedite Guangzhou’s industrial upgrading and economic transformation. The “6+1” components of the knowledge-based economy will generate higher value-added employment opportunities for Guangzhou.
